meridian BIOSCIENCE	Certificate of Analysis	COA No: CA_XBE-0001-2
		Version: 08

MyTaq™ DNA Polymerase

For Research and Further Manufacturing use only

Catalog No:	BIO-21107
Lot No:	PL303-B126290
Storage Conditions:	-20°C
Component Lot No:	MT-324103A
Expiry date:	April 2026

Quality Control Parameters

Analysis	Specification	Result
Functional	A 3Kb fragment is amplified with a dilution series of human genomic DNA and a dilution series of enzyme, using standard conditions and 30 cycles. Single distinct bands were observed with agarose gel electrophoresis (ethidium stained).	Passed
DNA contamination	Quantitative PCR analysis with no template. Presence of *E. coli* and mouse genomic DNA checked. Test sample must amplify in line with a reference sample.	Passed
DNase contamination	Incubation of a 1Kb double stranded DNA fragment. Incubation for 4 hours at 37°C with dilution series of DNase I. Analysed by agarose gel electrophoresis. Test sample must show less degradation than the limit of detection 2.5×10^{-3} U DNase.	Passed
