

# Random Hexamer Primers

Shipping: On Dry/Blue Ice

Catalog numbers

BIO-38028 : 25µg (500µL)

Batch No.: See vial

A Meridian Life Science® Company

Store at -20 °C

## Storage and stability:

Random Hexamer Primers is shipped on dry/blue ice. All kit components should be stored at -20 °C upon receipt. Excessive freeze/thawing is not recommended.

## Expiry:

When stored under the recommended conditions and handled correctly, full activity of the kit is retained until the expiry date on the outer box label.

## Primer sequence:

5' - d (NNNNNN) -3' N = G, A, T or C

## Concentration:

500 µL at 50ng/µL

## Quality Control:

Random Hexamer Primers are extensively tested for activity and absence of contamination.

## Safety Precautions:

Please refer to the material safety data sheet for further information.

## Notes:

For research use only.

## Description

Random Hexamer Primers consist of a mixture of oligonucleotides representing all possible hexamer sequences. Random Hexamer Primers are commonly used for priming single-stranded DNA or RNA for extension by DNA polymerases or reverse transcriptases.

During cDNA generation, random priming gives random coverage to all regions of the RNA to generate a cDNA pool containing various lengths of cDNA. Random priming is incapable of distinguishing between mRNA and other RNA species present in the reaction.

## Applications

- cDNA synthesis using a Reverse Transcriptase with RNA templates
- DNA synthesis using Klenow fragment with DNA templates
- DNA probe synthesis for use in Southern, Northern, and *in situ* hybridization applications

## Directions:

Use 1-5 µL in a 20 µL reverse transcription reaction (50-250 ng/reaction).

## Associated Products

Product Name	Pack Size	Catalog No.
Tetro Reverse Transcriptase	10,000 Units	BIO-65050
MyTaq™ One-Step RT-PCR Kit	25 Lanes	BIO-65033
dNTP Set	10,000 Units	BIO-39025
